SWING GATE ACCESSORIES

A Ball Joint Pivot Assembly

6500-490

Used to connect the swing gate operator arm when the operator has been installed horizontally level and the gate opens on an uphill or downhill slope. The ball joint will stay at the same angle as the gate bracket during gate cycling while the operator arm remains swinging horizontally level.

B Torsion Rod Assembly

1203-084 Assembly includes one (1) torsion rod. Add up to five (5) more as needed for counter-balance.

2600-299 Additional Torsion Rods

An un-level swinging gate **MUST** be restrained from opening or closing too quickly (gate runaway) when not connected to the gate operator. The torsion rod assembly provides a counter-balance to prevent gate runaway and relieves pressure on the gate operator.

- Counter-balances uphill swing gates
- Includes top bracket, bottom bracket and one (1) torsion rod
- Up to five (5) additional torsion rods can be added

C Flange Bearing Hinge

1200-009 3000 lb Weight Capacity

1200-010 Replacement Bearing

- Zert grease fitting
- Includes mounting bracket and hardware
- Two required per gate (top, bottom)
- Designed for use with 2" gate frame

C Sealed Bearing Hinge

1200-019 2000 lb Weight Capacity

1200-039 3000 lb Weight Capacity

- Includes mounting bracket and hardware
- Two required per gate (top, bottom)
- Designed for use with round or square gate frames

SLIDE & SWING GATE HARDWARE

Slide Gates | UHMW and Steel Wheels

Available with sleeve or sealed roller bearings. Four inch and six inch sizes of either machined steel or UHMW. Maximum gate weights of up to 14,000 lb.¹ V-Wheel assemblies include mounting bracket for 2x2 bottom rail. Tandem assemblies include pivoting mounting bracket. Tandem and Quad wheel assemblies provide superior performance for heavy gates by distributing the gate weight across four wheels instead of two.

Swing Gates

Ball Joint Pivot Assembly

Used to connect the swing gate operator arm when the operator has been installed horizontally level and the gate opens on an uphill or downhill slope.

Torsion Rod Assembly

An un-level swinging gate **MUST** be restrained from opening or closing too quickly (gate runaway) when not connected to the gate operator. The torsion rod assembly is used on un-level swinging gates that open on an uphill slope. It allows up to six "Twisting" torsion rods that will counter-balance the gate to keep it from opening or closing too quickly. It also relieves the pressure on the gate operator when the gate is in the downhill position.
